

THE PRINCIPLES OF TEOPHYSICS

Evolution in the Way of Jaguar-kings

A springboard story by

Lawrence Poole

The world is creative energy

The newest science looks into the Nature of things with "objectivity" and sees Light at the end of the tunnel. Form is molecular - and molecules have an atomic nucleus and a sub-atomic infrastructure to support the view that things are both solid and energy.

Einstein's logic shows how everything is energy at $[e = mc^2]$ and then quantum logic explains how this is always so, i.e. Planck expressed $[e = hf]$ wherein f is a constant frequency. And so it's more than a shameless play on words to conclude that the whole universe is in fact [l.o.v.e.] - i.e. "limitless oscillations of vibrating energy".

Science can affirm how energy is resonant Light held into that form by fundamental forces. This perception is also held by modern day "near-death'ers", mystics and saints since Time immemorial. All is Light. And then forces.

The ancient sorcerer-scientists of America studied these same forces and their natural laws with extreme subjectivity: They used their six senses. They kept careful notes for millennia and arrived at modern day conclusions. They then jumped ahead to push the envelope beyond today's knowledge and in fact concluded that the very structure of universe is intelligent, sacred and magical. It's Pure Consciousness. God. Master-M.I.N.D.* -

*Move in new dimensions

Those Jaguar-kings used their seeing to predict and prophesy events that - thousands of years later - are quite apparent and astonishingly true. And they left behind interesting predictions for the next little while too - the period between the 5th of May 2000 and the 23rd of December 2012 is promised as a Time of immense change. From 2150 to 3080 some people become immortal. I'll post my opinion on those predictions and events in the months to come.

The Olmec sorcerer-scientists said that human potential includes the ascension of the soul - both into states of high creativity and then right off of this Planet. They taught how we could leave this world without knowing death. In fact they said that the resurrection of the soul without its ascension is impossible.

Hereunder are twelve (12) principles explaining the SELF-empowered worldview of the Jaguar-kings.

THE 1ST TEOPHYSICS PRINCIPLE

At the 5th dimension, the universe is a « Space-Time-Consciousness continuum ». The fifth dimension is a configuration of higher amplitude, magnitude and frequency. At this level, across the Einstein/Rosen bridge into subatomic existence, the universe is resonant energy organized as "a creating field of consciousness"... Light. The physical world is alive and aware of itself. Managing Light allows for infinite Intelligence. Universe is a Master-Mind.

10 qualities describe « consciousness » in Space-Time:

1. Consciousness is experienced personally and - even while universal - it can only be related to subjectively;
2. Consciousness is constant - anyone can become aware of it, at any Time, in any Space;
3. Consciousness is continuous and fluid - i.e. it cannot be broken down into separate pieces, nor can it studied as a solid object;
4. Even if consciousness is universal and experienced personally, it can be qualified and therefore quantified objectively;
5. Objective and universal consciousness is molded into individual human spheres of subjective consciousness (noespheres) at specific vectors by the fundamental forces in Nature - as described by quaternion functions in trigonometry;
6. A noesphere interacts with an individual nervous system and thus animates it. «Personal mind» can be imagined an "electromagnetic aura" interacting with the physical body; aura "moulds" the personality from a universal field of consciousness and thereby limits subjective perception;
7. Individual mind is limited to a personal "conscious" and "subconscious" awareness that is engaged by inner dialogue; this dialogue qualifies its "attention" even while the sphere is indivisibly linked to a larger field of awareness: the infinite and morphic "unconscious intelligence" and a "Superconscious creating INTENT " are also part of the "whole" field of consciousness;
8. Consciousness is selective, i.e. from infinity, it focuses subjective perception to specific and discrete awareness;
9. Consciousness is expansive and therefore hierarchical;
10. Consciousness is self-organizing; a personal mind can therefore disavow or exalt its link to Infinity.

THE SECOND TEOPHYSICS PRINCIPLE

Superconscious Intelligence is co-creating the Space-Time continuum a limitless oscillations of vibrating energy, with Quantum Force. An instant before the Big Bang, God's l.o.v.e. (TEO) emerges from the void as Creator's INTENT .

Light emerging from the void creates a polarity of Light (+) in Hyperspace (-). Then, the speed of Light slows to sound - Big Bang - the limitless oscillations of vibrating energy relatively explored by Einstein ($e = mc^2$)!

Existence then, can be said to emerge in an interplay of this (+) (-) polarity as it manifests in the 4 fundamental forces in Nature. The 4 forces emerge first as a unified field of l.o.v.e. that is then divided (while remaining indivisibly bound to Hyperspace) into 4 fundamental forces before becoming those many forces we normally perceive and use:

Celestial and Terrestrial ::: Mechanics

The Gravitational Force

:::: Spin force

Heat

Acoustics

Optics

:::: Electricity

The Electromagnetic Force

HyperSpace ::: l.o.v.e. (limitless oscillations of vibrating energy) <-

:::: Magnetism

Electroweak force

The Radioactive force

(The Weak Nuclear Interaction)

:::: Grand Unification

The Binding force

(The Strong Nuclear Interaction)

THE 3RD TEOPHYSICS PRINCIPLE

HyperSpace and l.o.v.e. seem to imply two things because individuals experience "the effect of paradigm", i.e. « I-not-I » duality as an indivisible aspect of perception - even while Universe (visible and invisible) is one thing: a unified field of consciousness emerging in Space-Time.

Because duality is part the of process of human perception, nine tenets guide subjective perceivers in their quest to become more aware:

- Tenet A- Individuals are limited by very process of perception: Individuals perceive «I-not-I » duality even if Universe is indeed a unified field of Light, a Oneness;
- Tenet B- When one side of a duality is perceived, the other side comes into existence simultaneously, as its related twin;
- Tenet C- When one side of a duality is eliminated, its related twin is eliminated simultaneously;
- Tenet D- Acting on an object simultaneously influences its related twin no matter how far apart they are; this is called quantum action-at-a-distance and it reveals that life is indeed linked via hyperSpace, and that existence is not - nor can it be - limited in Space-Time;
- Tenet E- Individual consciousness assembles specific objects in Space and Time by perceiving them; quantum mechanics reveals that an object responds as both particles of matter and waves of Light (not either/or... both). Every object - as a wave of light - extends into hyperSpace and reaches infinity; every object is therefore part of a magical universe, and is interchangeable with any other object;
- Tenet F- An object cannot be said to exist until it is observed as a specific form, i.e. collapsing as a Lightwave into a limiting Space;
- Tenet G- An object can occupy more than one Space at the same Time because its Lightwave function is formless and interdimensional;
- Tenet H- Quantum objects can cease to exist in one dimension in Space-Time and instantly and simultaneously appear in another by collapsing through hyperSpace; this « paradigm-shift » provokes the perception of Pure Light, and reveals the Creating INTENT of universe.

THE 4TH TEOPHYSICS PRINCIPLE

The tenets of duality reveal that an eternal and omnipresent hyperspace - a quantum void or "no thingness" - is manifesting aspects of itself as a limitless oscillations of vibrating energy (l.o.v.e.) and is therefrom creating the physical world and all things that therein are.

Existence, then, emerges from a void as a "Creating INTENT " which is energy as $[e=mc^2]$, in continuum as $[e=hf]$, and as infinite intelligence as [l.o.v.e.].

The continuum is arranged into eternal Time (or motion) and infinite Space (or being) bound together in subjective perception (or consciousness) by a periodic force.

This force can thought "the bestower of Life" when experienced as Pure Light, or an "annihilating Death" when perceived as hyperspace.

Beyond our illusion of duality, the force is the « Oneness » the Ancients named God... TEO.

THE 5TH TEOPHYSICS PRINCIPLE

A principle of periodicity relates how a continuous outpouring of Light is emerging from an omnipresent hyperspace as the I.o.v.e. of God.

Existence then, can be understood as relative states of being wherein "formless" evolves into organized form: i.e. Hyperspace -> Creating INTENT -> Light as a limitless oscillations of vibrating energy, sub-atomic wave/particles, atomic nucleus, molecular forms, biological structures, matter and finally entropy from which energy tones back down to hyperspace .

The physical world is indivisibly connected to an infinite and metaphysical world by a quantum force with a creating INTENT . There is a reason for having life. As "biological structures" we can awaken to a perception of fundamental unity with this Infinite potential - the creating « TEO» - by becoming aware of Life's "periodic force".

The force governs the ebb and flow between spirit and matter. Not either/or... both. The force has been called "soul", "will", "Hunab ku", "kundalini" or "chi" when an emergence as primal energy and "the creative matrix", "a Super- Nature or earth-Spirit or Mother", or the "creating or holy spirit" when a pure creating intelligence. The periodic force is revealed to individuals as they become more aware of their higher needs; consciousness can expand to allow one to identify with the Creating Order.

(Write for our syntheses: «The 16 Steps in Human Evolution» and «The 6 Principles of Motivated Creativity».)

THE 6TH TEOPHYSICS PRINCIPLE

A principle of identity relates how quaternion geometry in the Space-Time-consciousness continuum creates the illusion of separateness between infinity and form by isolating humans into personal spheres of consciousness.

Separateness between things is an illusion because all things are in fact manifestations of the one causal « TEO» and differences between things are then merely a result of their evolution in Space, Time and consciousness.

Our ancestors honored the causal force as "God". « God the Father » is primal energy as is it manifest in the force of gravity; it is therefore "Time" itself in its oscillation between hyperspace and pure Light. God the Father says of himself: "I am Alpha and Ømega, the beginning and the end"; Time.

And causal godforce energy is simultaneously « God the Holy Spirit » (or God the Mother) as the electromagnetic force omnipresent as "Space" itself. The Spirit of God is omnipresence. Mother-Father (Space-Time) are creating forms in continuum.

An evolutionary principle requires every individual to consciously bind with Life by becoming aware of him or herself as « God the Son » (this affirmation of life is often called the second coming of Christ, or being born again in the Spirit), or to s/he will remain (un)consciously bound to death (entropy is antichrist). Human form is then a result of an assemblage of the Strong and Weak Nuclear Forces; humans experience these forces as the erotic drive and the aggressive drive.

A corollary to the sixth principle - called « The Rule of Evolutionary Motivation » (also called the law of cause and effect or the law of karma) - relates how a cycle of necessity defines the specific nature of each being's evolutionary progress. Outside of the "theo physical" continuum no difference can exist between any two things because all things are merely an oscillation between ALLness (the l.o.v.e. of universe as its creating INTENT) and "no thing" (the hyperspace container).

Motivation's rule includes a potential wherein an individual shifts perception and consciously evolves from a reactive worldview, to a proactive paradigm, then expands his or her mind creatively to experience Rapture: An awakening to a magical life.

THE 7TH TEOPHYSICS PRINCIPLE

All things have a teophysical identity linking them indivisibly to ALLness in a unit of oneness called a "monad" (The Father and I are "one"). Ten factors contribute to understanding how monads have both a metaphysical essence (a soul) and a physical beingness (a form or body) which are indivisible.

The "reason for being" includes awakening to one's ultimate identity, i.e. coming to see oneself as a physical extension of the one creating "Theos". The spiritual path is, then, a journey into "oneness" - an evolution into « the way of teophysics ».

- ✚ Monadic factor #1 - If an individual's influence in the continuum is imagined a sphere, the center of the sphere determines its subjective identity, "I", and the radiance to its surface then delineates "I"'s personal awareness. Its radiance also limits "I" from the infinite potential beyond the sphere's surface, the "not-I". Individual spheres of consciousness - noespheres - are limiting the experience of infinity.
- ✚ Monadic factor #2 - "I" is any position in the infinite "not-I" where an individual assembles awareness. The concept of human can now include an awareness of oneself as a physical body inside a metaphysical sphere of consciousness;
- ✚ Monadic factor #3 - "Not-I" is every other position in the universal Space-Time-consciousness continuum where "I" finds him or herself.
- ✚ Monadic factor #4 - Infinity's every geometric position is an "I-not-I" monad in some state of awareness.
- ✚ Monadic factor #5 - Any "I" can become aware of any other "I" or any part of, or all of, the universal "not-I".
- ✚ Monadic factor #6 - Any "I" can communicate with any other "I" in as much as their spheres of awareness intersect in the universal "not-I".
- ✚ Monadic factor #7 - The "world" is a hologrammatic light defined and agreed to by intersecting spheres of awareness as they co-exist in continuum. With their interactions, noespheres focus awareness and bring it into physical beingness, and this at absolute conjunctions in Space and Time.
- ✚ Of the infinite potential available in any here/now constant, focusing attention on specific awareness is what determines what is "real"; where and how we fix our awareness determines what we conjure out of the infinite "not-I".
- ✚ Monadic factor #8 -Every point in the physical world is bound in Time at the fourth dimension, by awareness in the fifth dimension and by hyperspace in the tenth dimension where everything loses its separate existence.
- ✚ Monadic factor #9 -The "not-I" is transpersonal and cannot favor any "I"; however, any "I" can become aware of its potential and expand, seeking oneness with the universal "not-I"; "I" will experience the « oneness » as the state of fusion: spiritual rapture.
- ✚ Monadic factor #10 - While any "I" may or may not be aware of his or her multidimensional existence, no "I" can be separated from, nor exist independently from, the universal "not-I"; "I" can therefore remain ever surrounded by infinite potential even if unable to consciously access it.

THE 8TH TEOPHYSICS PRINCIPLE

Teophysics relates the process by which individual [i-not-i] monads are subject to "observer effect" limits by the nature of the perceptual duality of the human central nervous system: This neurological context defines brain/mind's paradigms. Personal evolution involves expanding one's consciousness through four distinct worldviews so that it transcends its CNS limits. An individual can expand awareness from being relatively unaware and thereby reactive to its limits, to being self-aware and proactive, then aware of awareness and thus potentially creative, and finally, self-actualizing in that creativity, consciously applied, is magic.

These four faces of perception are objective limits in the infinite universe. Magic has been defined by mages through the ages as "the art of causing change to occur in conjunction with the will", i.e. Science -pure and applied. That controversial and great mage Aleister Crowley (as in holy) discovered twenty-seven (27) general theorems that expand on the idea:

- TEOphysics theorem #I – Evolution to magic's configuration is a self-fulfilling transformation in which a human noosphere learns to resonate the l.o.v.e. of universe. For reasons of Creative INTENT, the l.o.v.e. of universe is a quantum force; that force can be focused. Love then is universal energy that can be contained for magical purposes.
- TEOphysics theorem # II -Personal transformation to the magical configuration requires conforming to the above pre-determined and objective condition. The Creative INTENT of universe determined how l.o.v.e. is an indivisible potential that is transpersonal and constant; it can however be used subjectively. In other words, if any human uses the l.o.v.e. of universe magic occurs.
- TEOphysics theorem #III -Every magical operation conforms to the above rule. Any magical failure proves one or more of the principles of TEOphysics have not been fulfilled.
- TEOphysics theorem #IV -The first requisite for creating change magically is a thorough qualitative and quantitative understanding of the conditions that are affecting the [i] and the [not-i].
- TEOphysics theorem #V -The second requisite for creating change magically is the ability to motivate counter-forces to those conditions.
- TEOphysics theorem #VI -The third requisite for creating change magically is recognizing the indivisible unity between all things.
- TEOphysics theorem #VII –In this unity, every person has a path, a direction and a momentum, based partly on [i]'s evolution and partly on the [not-i] environment. Any individual forced from the realization of this unity, either by not understanding the magical essence of [i] or by external opposition imposed by [not-i], comes into conflict with the evolutionary INTENT of universe and reacts accordingly.
- TEOphysics theorem #VIII -Any individual whose will is in conflict with the Creative INTENT of universe is in entropic involution and cannot hope to influence the environment magically.

- TEOphysics theorem #IX -Any individual exercising creative will has the INTENT of universe to assist him.
- TEOphysics theorem #X –Even if all things are connected in a fifth dimension at consciousness, it is not necessary to understand how they are connected.
- TEOphysics theorem #XI- Magic and science both recognize how and allow that any individual can influence the continuity in Nature by the empirical application of force as per the TEOphysics principles. The communication between densities of matter and subtleties of light across the einstein-rosen bridge shows how pure magic is expressed in particle-wave dualities, even if the path of the communication remains beyond comprehension. Focusing one’s “creative will” across dimensions is, then, a magical and transformative act of power.
- TEOphysics theorem #XII -Ignorance of the nature of one's [i-not-i] monadic identity and being unaware of the potential of one’s creative will need not limit magical aspirations. Any idea of limit is based on the experience of the past while every creative and magic act extends the empirical evidence of the limitlessness of universe beyond subjective or agreed limits.
- TEOphysics theorem #XV -Every force in the universe is the limitless oscillations of vibrating energy contained as form; each form is then capable of being transformed into any other kind of form by using the appropriate means. There is an infinite supply of any particular force as may be needed for any magical operation.
- TEOphysics theorem #XVI -The application of any given force to a specific density in a form affects every order of existence of that form to its monad identity, regardless at which level the force is applied.
- TEOphysics theorem #XVII -An individual may learn how to use any force so as to serve any purpose, by taking advantage of magic's creative rules of flow.
- TEOphysics theorem #XVIII -An individual may attract any force in creation by being a fit receptacle for it, by establishing a connection with it and by arranging conditions so that the very nature of the force compels it to merge with that individual in monadic fusion.
- TEOphysics theorem #XIX -An individual's sense of somehow being separate from, and/or opposed to, the infinite and creative intelligence that permeates the universe is the very resistance that keeps such an individual from creatively using the forces in universe for magical purposes. This sense establishes an “ego-density” isolation and then requires “self” esteem to re-unify the [i-not-i] monad.
- TEOphysics theorem #XX -An individual can only attract and creatively use specific force or form if there’s parasymphathetic affinity with that force or form.
- TEOphysics theorem -Being capable of perceiving -and thus using- the forces and forms in Nature, is, in essence, one's sacred identity. Any individual, therefore, may subjugate the entire universe to carry out a magical operation. Force organizes in resonance to individual will when that will is in empathy with the Creative INTENT of universe.
- TEOphysics theorem #XXI -There is no limit to the relationship that can be developed between an individual and the Infinite potential. If an individual creates receptivity to any idea, resistance ceases to exist. The power to counterbalance any force is then only limited by [i]’s resistance and/or the environmental circumstances imposed by [not-i].

- TEOphysics theorem #XXII -While a person may be self-sufficient, an individual remains incomplete and unfulfilled unless a rightful unity with the Creative INTENT of universe has been consciously initiated.
- TEOphysics theorem #XXIII – Consciousness can contract or focus itself into a single point. The ability of consciousness to contract into focal point is a result of its particle-like nature. An individual’s consciousness can expand itself to a oneness with Infinity. The ability of consciousness to expand its noosphere into an illuminated field of infinite potential is a result of its wave-like nature. Magic applies this understanding to creative acts.
- TEOphysics theorem #XXIV -Every individual has the inalienable right to actualize him- or herself at every plane of existence, and a pre-determined obligation to awaken to the realization that “oneness” with the Creative INTENT of universe. The evolutionary path is "self" determining in that the only rule for participating in the Time/Space/consciousness continuum is to abolish ego-resistance; this is accomplished by awakening receptivity to universal l.o.v.e. As a force present in the forms linking [I] and infinite [not-I]. The resulting paradigm shift allows a world of transpersonal and magical configurations.
- TEOphysics theorem #XXV - Every individual must consider the magical and self-organizing nature of the universe each Time he or she acts, or even thinks, for every decision has an influence that ultimately affects the evolution of ALL.
- TEOphysics theorem #XXVI – Because every individual is a part of the indivisible ALL, universe has determined humans have a personal responsibility to evolve creatively; resistance to any form of l.o.v.e. is entropic, anti-evolutionary and anti-christ.
 - TEOphysics theorem #XXVII -Every individual can actualize his or her full potential by their expression oneness with the Creative INTENT of universe without fear that it may interfere with others; if interference does occur, it will be the fault of others for not being in their proper place, i.e. actualizing their own link to Creative INTENT .

THE 9TH TEOPHYSICS PRINCIPLE

There are five general laws that explain how individual monads form the TEOphysics system in a way that is unified and essentially hierarchical, while establishing a universe that is managed according to laws of creative synergy and order, i.e. a cosmos:

I-The law of conservation of mass states that the number of monads entering a world system must equal in number the monads that will leave that system.

II-The law of constant proportions states that monads combine to form specific cosmic elements that are always the same type within any world system. (ex. atom to atom, molecule to molecule, noosphere to noosphere, etc.)

III-The law of multiple proportions states that as monads enter any world system they evolve outwards from within, and combine into discrete groups along planes of self-organization (ex. macromolecules, cellular tissue, associations, nations, galaxies, etc.). The energy needed to penetrate one plane of organization or the next is the same for each monad in that world system.

IV-The law of equivalent proportions states that after a monad enters a specific plane of organization it can communicate with other monads existing at that plane. The instructions or rules governing each plane of consciousness are an inherent property of that plane and a monad entering it must evolve according to the instructions of that plane. Also, in order for any two monads to interact or create in synergy within a world system, they must be focused on the same plane of organization

V-The law of constant ratios states that when monads interact, their [not-i]'s overlap by discrete amounts. The ratio of the overlap is equal to the degree of potential that can influence those monads. The interaction is measured in terms of subjective "depth".

THE 10TH TEOPHYSICS PRINCIPLE

TEOphysics establishes eight planes of potential in the cosmic system of consciousness, identifies them as:

- (8) a Morphic plane that deals with infinite and discarnate intelligence manifest as the causality of universe;
- (7) a Logoic plane dealing with a resonant creating consciousness as noespheres of force;
- (6) a Monadic plane where evolutionary energy is [-] and [+] polarities of this single creating consciousness;
- (5) an Atmic plane that deals with the universe from the synthesis of sub-atomic wave/particle as energy flow;
- (4) a Spiritual plane relating the atomic structure;
- (3) a Mental plane dealing with molecular form;
- (2) an Emotional or Astral plane that governs biological processes; and
- (1) a Physical plane where the laws of matter and entropy are apparent.

The conjunctions where one plane of consciousness becomes another have been called plexi or "rainbow gates" in Western-magical thought, and chakras or "the sacred wheels of life" in Eastern spiritual traditions. These power gates are linked to the endocrine-immune system at energy levels and thereby to the Central Nervous System and the brain. They allow an individual to interact in multi-dimensional ways and link the noesphere to the Earth system to the universal system.

THE 11TH TEOPHYSICS PRINCIPLE

The TEOphysics worldview imposes no limits to existence and thus does not impose a mythic supreme being per se. TEOphysics does, however, preclude an Infinite and Creating Intelligence that is permeating all of creation as a constant force, and allows for personal attainment of “oneness” with this sacred intelligence at each of 8 planes of potential that comprising the magical system.

As perception interacts with each plane of potential, subjective awareness expands and thus individual enters into resonance with an increasing subtlety of creative intelligence. Universal identity is a relative Supreme Beingness . Interaction at multidimensional realities has evolved rules of system:

The 1st rule of system -All aggregates compose systems.

The 2nd rule of system -For every system there is a creative INTENT , organizing or ruling principle.

The 3rd rule of system –The creative systems express hierarchical structures that are synergetic and evolutionary in nature.

The 4th rule of system -Hierarchies descend infinitely into Time, into the densities of matter, to absolute blackholes, and form a Hyperspace .

The 5th rule of system -Hierarchies ascend to the subtleties of Timelessness, reaching an ultimate Hyperspace of infinite potential.

The 6th rule of system -Hierarchies are created, transformed and abolished according to self-organizing need.

The 7th rule of system -Every system is composed of a host of smaller systems.

The 8th rule of system -Every system is a component part of a larger creating system.

The 9th rule of system -The creating system organizes monads as hierarchies of intelligence to interact synergetically.

The 10th rule of system -The Creative INTENT of universe interpenetrates the Earth hierarchy at every plane of existence.

The 11th rule of system -Earth's karmic structure is largely created by individual who have not yet resolved the paradox explaining how duality is in fact polarities of an indivisible monad –they seek to divide rather than unite. Organizational hierarchies that are entirely man-made, even while linked creatively on different Time-lines are maintaining Earth’s destiny.

The 12th rule of system -Any individual may transcend Earth's karmic structure by shifting paradigms to participate in an awakening to the universal system and ascending the eight planes of consciousness. The ascension results in willfully expanding the subjective paradigm one harmonic octave, so that it overlaps the magical system in the continuum.

THE 12TH TEOPHYSICS PRINCIPLE

The Unified Field Formula is the key to crossing dimensions. It represents a trigonal fusion of subjective consciousness in monad with the absolute Creative energy in universe. In the TEOphysics model, Time, Space and Dimension are bendable arcs in a grid of organizational information. The entire universe is linked in a mathematical matrix of pure Light, Creative Intelligence.

The formula is a symbol representing the precise conjunction wherein [i-not-i] are one with Creative INTENT . The fusion is a quantum that opens a tesseract* in the continuum and allows individual consciousness to transcend noesphere-limits of perceptual Time/Space.

The mathematical certainty of the formula is only proven to .00007% (+)(-) error to \emptyset to be then called the "probability phenomenon" of the Unified Field formula; personal certitude can only from subjective experience or must otherwise be self-induced in order for the field to be personally unified. Individual will **is** a part of the process, but each will has to surrender to its own magical evolution:

$$\begin{aligned} & e = mc^2 \\ (+1) + (-1) &= 0 \\ & 1 + 2 = 3 \rightarrow 4 \\ & 5 = 6 \\ \text{thus } 6 &= 5 \\ \text{therefore } & 7; 8; 9; \\ \\ \text{then } 2 &= 00 \\ \\ \text{so } e &= mc^3 \end{aligned}$$

**THE RULE IS A MAP
AND THE MAP IS A PROCESS.
PERSONAL POWER IS A RESULT OF THE PROCESS.**
